["Leadership at 12 O'clock High"](#) –presented by David Hutton Ph.D.

This is the ultimate adaptive leadership training program - and you get to review a great movie too. Leadership can be a difficult topic to fully grasp in a meeting room environment. This highly interactive, "showing rather than telling" workshop explores leadership in a unique way. This workshop doesn't just describe adaptive leadership, it shows it in action. Participants get to see how effective leaders adjust their style of action and communication to suit the situation

David Hutton combines a Ph.D. in Computer Science, and being an award winning fiction author with excellent business qualifications. His experience includes being CEO of a public, NASDAQ listed, technology company and GM of a major division of a member of the Fortune 500. Born in England, his international background includes running the three US-based subsidiaries of a Japanese corporation

"Operational Resilience: Essential Considerations for Life Sciences Automation" by Jim Grogan
CGEIT CISM Sr. Director SunGard Data Systems Inc. Resilient operations is not optional today for life sciences IT systems today - it is expected and demanded. Organizations depend on resilience to deliver quality services that meet the needs of internal customers and external trading partners, often mandated by service level agreements. SunGard will present and discuss business trends, technology changes and best practices that are driving life sciences data center decisions today."

Jim Grogan has over thirty years experience developing and supporting automated systems, and has directed operational quality for systems supporting more than 50,000 online users, and has been part of the development and deployment of services related to business continuity and resilience at SunGard for more than two decades. Jim holds a Master's Degree in Computer Science, and is Certified in the Governance of Enterprise Information Technology (CGEIT) along with being a Certified information Security Manager (CISM).

“SharePoint in a FDA Regulated Environment”, presented by **John Postle**, MBA, CPA, Senior Vice President, Life Science, Court Square Group and **Kent Fernald**, MBA, Development Manager and CTO for Court Square Group

Pharmaceutical and biotech companies have been facing increasing demands to improve their organizational effectiveness through information sharing and collaboration. At the same time, there is an important need for a controlled document management system that is compliant with FDA regulations. In this conference, our speakers not only look at the steps that have been successful for designing, configuring, and implementing Microsoft SharePoint within the confines of a regulated environment, but also review organizational collaboration features (wikis and blogs) and document workflows that organizations are using.

Speakers John Postle and Kent Fernald explain how to achieve ongoing compliance through the use of SharePoint as a validated application in a qualified environment. They also present real-life examples of several regulatory compliant business applications that have been developed using the SharePoint platform.

“Improving eRegulatory Business Process Workflow through Technology Integration” Presented by Hector Trestini, Director of eRegulatory Affairs at Extedo Inc., a world leader in eRegulatory solutions for the Pharmaceutical, Medical Device and Crop Science industries.

Hector’s career spans over fifteen years and includes vast experience in information technology architecture and management and a respected expert in Pharmaceutical Regulatory Submission creation and Records Management business process workflows.
